

"The bright green and yellow Paper Retriever® bins will continue to accept all recyclable paper. AbitibiBowater will continue to send all collected tons of recyclable paper to our mills to be used to create new newsprint. Other companies may be discontinuing their recycling services because of the dropping value of recyclable commodities which include paper. Such companies are making the decision to dispose of recyclable materials in landfills or discontinue the service altogether.

Because our umbrella company is a newsprint manufacturer, we have some protection from the fluctuating price of the recyclable paper commodity. All of the paper collected in our bins will be used to create newsprint in our paper mills. As for the other recyclable commodities that we collect through our single stream program (i.e. plastics, aluminum and metals) we have established partnerships and marketplace contracts for the disposition of these commodities. None of your recycled materials will go to the landfill.

If you are recycling with AbitibiBowater, you may rest assured that your materials will meet their intended purpose – to be recycled! We remain committed to sustaining the environment, our customer relationships and our business."
